Fuji Gas Analyzers

Fuji Electric Co., Ltd.

Conservation of sound environment is also our important task.

Our company commercialized an infrared type gas analyzer in 1954 and recently has developed unique analyzers one after another as represented by a CO/O_2 analyzer for monitoring of dioxins emission reguration and a simultaneous multi-component gas analyzer in order to enrich the product lineup.

Our company will continue offering analytical instruments helpful for protection of the global environment through the integration of new technologies and long experience.

INFRARED GAS ANALYZER best suited for measuring exhaust gas in stack

Simultaneous Measurement of 5 components; NO_X, SO_2, CO, CO_2 and O_2

Type: ZSU

CO, O_2 Gas Analyzer for stack gas

Type: ZSQ

Simultaneous Measurement of 7 components; NO_X, SO_2, $HC\ell$, CO, CO_2, O_2, Soot and Dusts

Type: ZSU-7

Compact Type NO_X, SO_2, CO, CO_2 and O_2 GAS ANALYZER

Type: ZSVF

CO GAS ANALYZER
for Air pollution monitoring

CO GAS ANALYZER for Automobile tunnel

Type: ZSA

CO_2 CONTROLLER
best suited for building ventilation and green house

Type: ZFP

CROSS STACK LASER GAS ANALYZER

Type: ZSS

Fast measurement of NH_3 Gas or $HC\ell$, H_2O, CO, CO_2, CH_4, O_2 Gas concentration in Stack

Transmitter unit
Air purge
0.5 to 10m
Stack
Air purge
Receiver unit
Laser Beam
NH_3 CO
$HC\ell$ CO_2
H_2O CH_4
O_2
Control unit
Power supply

CO, CO_2, CH_4 ANALYZER

Type: ZFG

OXYGEN ANALYZER SERIES best suited for combustion control and energy saving

IN-SITU ZIRCONIA OXYGEN ANALYZER

Type: ZSB

Type: ZKM1   Type: ZKM2   Type: ZKME

Type: ZFK8

(Converter)   (Converter)   (Converter)

Fast response type PARAMAGNETIC ANALYZER

Type: ZAJ   Type: ZKG

1

ANALYZER best suited for measuring atmosphere gas in heat treatment furnace

● INFRARED system

Single beam type	Dual beam type

Single beam type

CO, CO$_2$, CH$_4$, SO$_2$, NOx and O$_2$ measuring, 4-component analyzer

Type: ZRJ

NOx, SO$_2$, CO, CO$_2$, CH$_4$ and O$_2$ measuring, 5-component analyzer

Type: ZRE

Dual beam type

NOx, SO$_2$, CO, CO$_2$, CH$_4$ and O$_2$ measuring, 5-component analyzer

Type: ZKJ

NOx, SO$_2$, CO, CO$_2$ measuring, 1-component analyzer

Type: ZRC6

● THERMAL CONDUCTIVITY system
GAS ANALYZER

He, Ar, and H$_2$ measuring

Type: ZAF

Easy-to-carry PORTABLE TYPE

CO, CO$_2$, CH$_4$, O$_2$ analyzer

Type: ZSVS

Automobile exhaust gas analyzer for measurement of HC, CO, CO$_2$ and O$_2$

Type: ZKE

Satisfactory products for customers will be delivered under strict quality control.

指定製造事業者指定書

計量法第９０条の規定に基づき下記のとおり
指定製造事業者の指定をします

（指　定）平成１４年４月１７日
（再交付）平成２２年７月２１日

経済産業大臣　直嶋　正行

記

指　定　番　号　　３９１９０１

製造事業者
の　　名　称　　富士電機システムズ株式会社

指定する工場又は
事業場の名称　　富士電機システムズ株式会社
　　　　　　　　環境ソリューション本部　産業ソリュ
　　　　　　　　ーション事業部　東京工場　双葉分室

所　在　地　　山梨県甲斐市下今井７３２番地

事業の区分の細別　濃度計第一類

"Status of manufacturer specified in the Measurement Law" already acquired: Specification No. 391901

ISO 14001 certification already obtained: Registration certificate No. EC97J1059

ISO 9001 certification already obtained: Registration certificate No. JMI-0122

INFRARED GAS ANALYZER

Is the air really safe?

Yes. Because a gas analyzer keeps an eye on pollutant gases.

Simultaneous Measurement of NO$_X$, SO$_2$, CO, CO$_2$ and O$_2$ for stack gas

Type: ZSU

Japanese pattern approval
SAS992-1 (SO$_2$ meter)
SAC992-1 (CO meter)
SAN991-1 (NO$_X$ meter)
SE981 (O$_2$ meter)
SF011 (O$_2$ meter)

FEATURES
■Measurement by the infrared ray method (dual beam optics) excellent in long-term stability.
■Hardly affected by unintended gases because interference components' influence is corrected with twin detectors.
■Standard-equipped with automatic zero/span calibrating function.
■Space saving design allowing maintenance from the front of each analyzer.

SPECIFICATIONS
● Measuring object: Exhaust gas of Incinerator and boiler, etc.
● Measurable components: NO$_X$, SO$_2$, CO, CO$_2$, O$_2$
● Measuring system: Dual beam type infrared method
　　　　　　　　(O$_2$: Zirconia method or Paramagnetic method)
● Measurement range: NO$_X$: 0 to 50 ·········· 5000ppm
　　　　　　　　SO$_2$:　0 to 50 ·········· 5000ppm
　　　　　　　　CO:　　0 to 50 ·········· 5000ppm
　　　　　　　　CO$_2$: 0 to 10 / 0 to 20%
　　　　　　　　O$_2$:　　0 to 10 / 0 to 25vol%
● Repeatability: ±0.5%FS
● Linearity: ±1%FS
● Zero/span drift: ±2%FS/week (O$_2$: ±2%/month)
● Response time: NO$_X$, CO, CO$_2$, O$_2$: 2 minutes, SO$_2$: 4 minutes
　　　　　　　(90% response, from the device inlet)
● Output signal: 4 to 20mA DC
● Contact output: Auto calibration status, maintenance status,
　　　　　　　　concentration alarm, CO peak count alarm,
　　　　　　　　range identification of each component, etc.
● Contact input: Auto calibration start, range changeover, pump ON-OFF, etc.
● Function: Auto calibration, O$_2$ correction, average value calculation,
　　　　　　　concentration alarm, CO peak count alarm, etc.
● Display: LCD with back light
● Recorder: 6-point recorder mounted (option)
● Power supply : 100V, 110V, 115V, 200V or 230V AC
● Outer dimensions: 800(W) x 1710(H) x 615(D) mm

Simultaneous Measurement of CO, O$_2$ Gas Analyzer for stack gas

Type: ZSQ

Japanese pattern approval
SAC984 (CO meter)
SE981 (O$_2$ meter)

FEATURES
■Measurement by the infrared ray method (single beam optics) excellent in long-term stability.
■Provided with CO peak count alarm and self-diagnostic function.
■Standard-equipped with automatic zero/span calibrating function.
■Space saving design allowing maintenance from the front of each analyzer.

SPECIFICATIONS
● Measuring object: Exhaust gas of incinerator, etc.
● Measurable components: CO, O$_2$
● Measuring system: Single beam type infrared method
　　　　　　　　(O$_2$: Zirconia method)
● Measurement range: CO:0 to 200·········2000ppm
　　　　　　　　　O$_2$:　0 to 25vol%
● Repeatability: ±0.5%FS
● Linearity: ±1%FS
● Zero/span drift: ±2%FS/week (O$_2$: ±2%/month)
● Response time: 90 seconds
　　　　　　　　(90% response, from the device inlet)
● Output signal: 4 to 20mA DC
● Contact output: CO peak count alarm, auto calibration status,
　　　　　　　　error status, etc.
● Function: Auto calibration, O$_2$ correction, average value
　　　　　　　calculation, CO peak count alarm, etc.
● Display: LCD with back light
● Recorder: 6-point recorder mounted (option)
● Power supply: 100V AC, 50/60Hz
　　　　　　　(110 to 240V AC: transformer built in)
● Outer dimensions: 600(W) x 1580(H) x 675(D) mm

● Gas Sampling System Diagram example (ZSU type)

Gas extractor (ZBAK type)

◆ SPECIFICATIONS
- Temperature of gas used:
  Max 800 C (SUS extraction tube)
  Max 1500 C (SIC extraction tube)
- System: Electrical heating
- Material of extraction tube:
  SUS 316, or SIC + SUS 316
- Length of extraction tube:
  600 to 2000mm
- Mounting method: JIS 5K 65A flange
- Filter: SUS 316 wire mesh
- Sampling gas outlet: RC1/4
- Power supply voltage: 100V AC, 100 VA (for built-in heater)
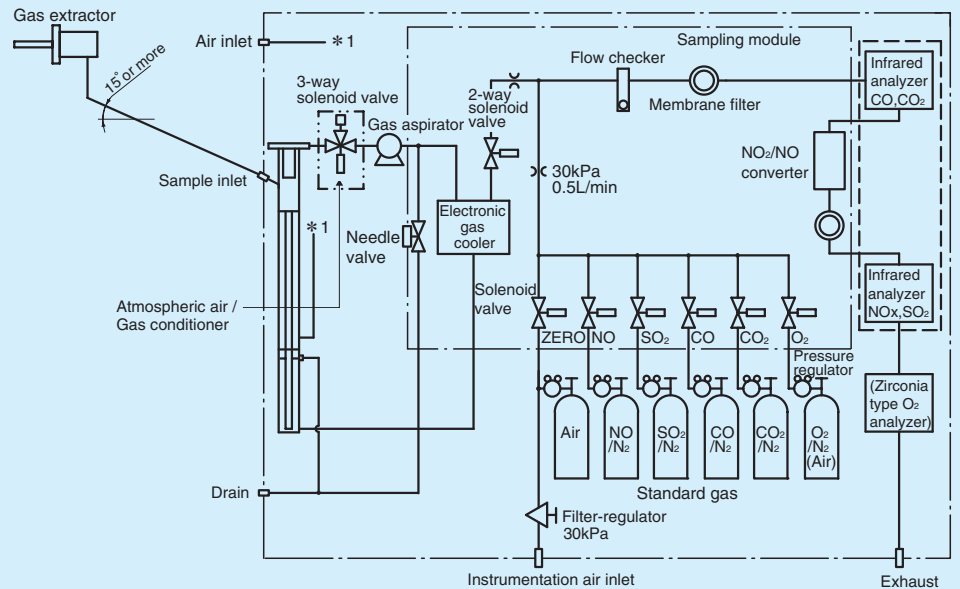

Simultaneous Measurement of NOx,SO2, HCl,CO, CO2,O2,Soot and Dusts for stack gas

Type: ZSU-7

Japanese pattern approval
SAS992-1 (SO2 meter)
SAC992-1 (CO meter)
SAN991-1 (NOx meter)
SE981 (O2 meter)
SF011 (O2 meter)

FEATURES
■ Measurement can be taken by the infrared ray method (single beam type) having excellent stability and maintainability.
■ All functions are included in the small locker of 600 (W) × 515 (D) × 1710 (H) mm.
■ Zero and span auto calibration function is equipped as standard.
■ Space-saving configuration that is accessible for maintenance on the front panel of the analyzer.

SPECIFICATIONS
- Measuring object: Exhaust gas of Incinerator and boiler, etc.
- Measurable components: NOx, SO2, HCl ,CO, CO2, O2, Soot and Dusts
- Measuring system: Dual beam type infrared method
  (O2: Zirconia method, HCl : Laser method)
- Measurement range: NOx: 0 to 50 ···················5000ppm
  SO2: 0 to 50 ···················5000ppm
  HCl : 0 to 15ppm·m ·········5000ppm·m
  CO: 0 to 50 ···················5000ppm
  CO2: 0 to 10 / 0 to 20%
  O2:   0 to 10 / 0 to 25vol%
  Soot and Dusts: 0.01 to 1000mg/m³
- Repeatability: ±0.5 FS (infrared method),
  ±2% FS (Laser method)
- Zero/span drift: ±2%FS/week
  (O2: ±2% FS/month HCl : ±2% FS)
- Response time: NOx, CO, CO2, O2: 2 minutes,
  SO2: 4 minutes
  HCl :1 to 5 sec.
  (90% response, from the device inlet)
- Output signal: 4 to 20mA DC
- Contact output: 8 point (Auto calibration status, maintenance status,concentration alarm etc.)
- Contact input: Auto calibration start, range changeover etc.
- Recorder: Paperless recorder mounted (option)
- Power supply: 100V, 110V, 115V, 200V or 230V AC
- Outer dimensions: 1215(W) x 1780(H) x 700(D) mm

Simultaneous Measurement of NOx, SO2, CO, CO2 and O2 for stack gas

Type: ZSVF

FEATURES
■ A maximum 5 components out of NOx, SO2, CO, CO2, CH4 and O2 can be measured simultaneously.
■ The large LCD screen with clear display assures simple operation.
■ Single-beam infrared gas analyzer having excellent stability is adopted.
■ The separate structure allows the analyzer unite and the pretreatment unit to be placed separately.
■ Measurement can be taken continuously for up to 5 days.

SPECIFICATIONS
- Measuring object: Combustion exhaust gas measurement, etc.
- Measurable components: NOx, SO2, CO, CO2, CH4, O2
- Measuring system: Singlel beam type infrared method
  (O2: Paramagnetic method or galvanic method)
- Measurement range: NOx: 0 to 500 ·············5000ppm
  SO2: 0 to 500 ············· 1%
  CO: 0 to 200 ············· 100%
  CO2: 0 to 200 ············· 100%
  CH4: 0 to 2000ppm···· 100%
  O2:   0 to 5 / 25%
- Repeatability: ±0.5%FS
- Linearity: ±2%FS
- Zero/span drift: ±1%FS/day
- Response time: 50 second for 90% response from the device inlet but 3 minutes for SO2
- Output signal: 4 to 20mA DC or 0 to 1V DC
- Communication function: RS-232C (MODBUS)
- Functions: Auto calibration, O2 correction, average value calculation
- Indication: LCD with back light
- Power supply: 100 to 115V AC or 200 to 240V AC, 50/60Hz
- Outer dimensions: 365(W) x 574(H) x 514(D) mm

CROSS STACK Laser Gas Analyzer

Fast measurement of NH_3 Gas or HCl, O_2, H_2O, CO, CO_2, CH_4 Gas concentration in Stack

Type: ZSS

Transmitter unit

Air purge

0.5 to 10m
Stack

Air purge

Receiver unit

Laser Beam

Control unit

NH_3 CO
HCl CO_2
H_2O CH_4
O_2

Power supply

FEATURES

■ Excellent Long-term Stability, and Maintenance-free!
■ Zero drift: ±2.0%FS
■ Highly absorptive and corrosive gasses can be measured in low concentration.
■ Usable in high temperature and dusty environment.
■ Fast response (1 to 5 sec.) is available, and integration with the control system is feasible.
■ Measurable components measurable range

Measurable components,	Min. measuring range	Max. measuring range
HCl	10ppm	5000ppm
NH_3	15ppm	5000ppm
HCl+H_2O	50ppm(HCl)	1000ppm(HCl) Note 1)
NH_3+H_2O	50ppm(NH_3)	1000ppm(NH_3) Note 1)
O_2	4vol%	50vol%
CO	2vol%	50vol%
CO_2	2vol%	50vol%
CO+CO_2	2.5vol%	50vol%
CH_4	100ppm	50vol%

Note 1) The H_2O range is fixed to 50 vol%.

Compact type infrared gas analyzer
Type: ZSVS

FEATURES

■ The gas concentrations of 4 components among CO_2, CO, CH_4 and O_2 measured simultaneously and continuously with a single gas analyzer.

■ Transportable with built-in pump, filter and flow meter.

■ Provided with computation functions such as CP calculation, O_2 correction, moving average, etc.

■ Smooth operation in an interactive way through a large-size LCD.

■ Excellent in long-term stability and easy maintenance using single beam system.

SPECIFICATIONS

● Measurable components: CO_2, CO, CH_4 and O_2

● Measuring system: Single beam type infrared method
  (O_2: galvanic cell method)

● Measurement range: 0 to 200 --------100%CO_2
  0 to 200 --------100%CO
  0 to 100 --------100%CH_4
  0 to 5/25%O_2

● Numbers of range: Max. 3 ranges

● Measurable components:Max. 4 components

● Repeatability: Drift: Within ±1.0% of full scale/day

● Response time: Less than 50 seconds
  (90% response from the gas inlet)

● Output signal: 4 to 20mA DC or 0 to 1V DC

● Communication function: RS232C (MODBUS)

● Standard function: CP calculation, O_2 correction, O_2-corrected moving average value, automatic OFF, etc.

● Indication: LCD with back light

● Outer dimensions: 365(W) x 211(H) x 527(D) mm

● Power-supply voltage: 100 to 115V AC or 200 to 240V AC

ZIRCONIA OXYGEN ANALYZER

This type of oxygen analyzer is capable of measuring oxygen gas even without a gas aspirator, gas cooler, etc. Optimum for combustion control of boiler, refuse incinerator, sludge incinerator, heating furnace, etc.

O_2

Self stand type	IP66 Type	IP67 Type	Frame-proof Type	Detecting unit

Self-stand type accommodating necessary devices.

Type: ZSB

Compact and High capacity

Detector type: ZFK8	type: ZKM1	type: ZKM2

FEATURES

■Automatic calibration and manual/auto blow-down functions are provided. A solenoid valve and other necessary devices are incorporated.

■Measuring range is freely settable within 2 to 50%.

■Incomplete combustion level indication is selected when oxygen becomes inadequate.

SPECIFICATIONS

● Measuring object: Oxygen in combustion exhaust gas
● Measuring range: 0 to 2-----50vol% O_2 (freely settable)
● Repeatability: ±0.5%FS
● Linearity: ±2%FS
● Response time: Within 10 seconds (From calibration gas inlet)
● Oxygen concentration output signal: 4 to 20mA DC or 0 to 1V DC
● Contact output: 4 points (1a relay contact) Upper/lower limit alarm, maintenance status, blow down status, contact output during calibration
● Contact input: Auto calibration start, inhibit calibration
● Indication: Oxygen concentration display (3-digit LED), mode display (3pcs LED), operation/setting display(16-digit, 2-line LCD)
● Combustion efficiency display: Option
● Communication interface: RS485 (option)
● Calibration method: Automatic, manual by key operation, input from external contact
● Power supply: 100, 115 or 230V AC 50/60Hz
● Construction: Pipe stand type or wall mounting type
● Cable length from converter part to detector: 20m, max.

FEATURES

■Modular detector design allows easy field replacement of zirconia element.
■High-speed response of 4 to 7 seconds.
■Case structure available in two types: IP66 and IP67.
■May be programmed without opening the case cover (ZKM1).

SPECIFICATIONS

● Measuring object: Oxygen in combustion exhaust gas
● Measuring range: 0 to 2-----50vol% O_2 (freely settable)
● Repeatability: ±0.5%FS
● Linearity: ±2%FS
● Response time: 4 to 7seconds (from inlet for calibration gas)
● Oxygen concentration output signal: 4 to 20mA DC or 0 to 1V DC
● Contact output: 6 points (1a relay contact)
  Alarm, instrument error, under maintenance, under blow down, zero gas span for out put calibration.
● Input contact: 3 points (no voltage contact)
  Blow down, starting calibration, heater OFF, range change, external hold
● Concentration value indication: Digital indication in 4 digits
● Combustion efficiency display: Option
● Communication function RS232C or RS485 (MODBUS)
● Calibration method: Automatic, manual by key operation, input from external contact
● Power supply: 100 to 120V AC or 200 to 240V AC 50/60Hz
● Mounting method : Mounting on panel surface, or pipe stand
● Cable length from converter part to detector: 100m, max.
ZKM-type System Diagram

Blow-down air pressure inlet

Transmitter: Type ZKM1

RS-232C or RS-485

Detector: Type ZFK8

Output signal 4 to 20mA DC

SSC

Flow guide tube / Ceramic filter / Heater / Flange / Reference gas / Output / Measured gas / Electrode / Zirconia element

Detectors applicable for various fields

Standard type

800 to 1500 C: with ejector

Various combinations of detector and flow guide tube have been prepared for use under different site conditions.

Note) Blow-down refers to a function for blowing away the dust accumulating in the flow guide tube of detector unit by compressed air.

Application	Temperature	Gas flow	Dust	Remarks	Adaptable detector/flow guide tube	Mounting method
Boiler, etc. (General- purpose)	600°C or less	5 to 20m/s	Below 0.2g/Nm³	Fuel: Gas, oil	General-purpose	JIS 5K 65A
			Below 10g/Nm³	Fuel: Coal	With blow-down nozzle	JIS 5K 80A
Garbage incinerator, Sludge incinerator (For anti-corrosion)	600°C or less	5 to 20m/s	Below 1g/Nm³	Small amount of moisture in gas	For anti-corrosion	JIS 5K 65A
			Below 10g/Nm³		For anti-corrosion with blow-down nozzle	JIS 5K 80A
			Below 25g/Nm³		For anti-corrosion high dust	JIS 5K 80A
			Below 25g/Nm³		For anti-corrosion high dust with cover	JIS 5K 80A
Heating furnace (General- purpose)	800°C or less	1m/s or less	Below 1g/Nm³	Small amount of moisture in gas	With ejector	JIS 10K 65A
	1500°C or less	1m/s or less	Below 1g/Nm³		With ejector	JIS 10K 65A

Flame-proof type

Detector type: ZFKE

Conveter type:ZKME
Zirconia O$_2$ analyzer for ZRJ, ZKJ, ZRE(Built-in type)

Type: ZFK7

OXYGEN ANALYZER

FEATURES

■Modular detector design allows easy field replacement of zirconia element.
■High-speed response of 4 to 7 seconds.
■May be programmed without opening the case cover.
■Flame-proof type available for explosive atmospheres TIIS Exd IIB T6, NEPSI/Eexd IIC T6 ExII2G

SPECIFICATIONS

● Measuring object: Oxygen in combustion exhaust gas
● Measuring range: 0 to 2-----50vol% O$_2$ (freely settable)
● Repeatability: ±0.5%FS
● Linearity: ±2%FS
● Response time: 4 to 7seconds (from inlet for calibration gas)
● Oxygen concentration output signal: 4 to 20mA DC or 0 to 1V DC
● Contact output: 6 points (1a relay contact) Alarm, instrument error, under maintenance, under blow down, zero gas span for out put calibration.
● Input contact: 3 points (no voltage contact) Blow down, starting calibration, heater OFF, range change, external hold
● Concentration value indication: Digital indication in 4 digits
● Combustion efficiency display: Option
● Communication function RS232C or RS485 (MODBUS)
● Calibration method: Automatic, manual by key operation, input from external contact
● Power supply: 100 to 120V AC or 200 to 240V AC 50/60Hz
● Mounting method : Mounting on panel surface
● Cable length from converter part to detector: 100m, max.

The combination table of NDIR gas analyzer and Zirconia O$_2$ analyzer

| NDIR gas analyzer	Zirconia O$_2$ analyzer
ZRJ	ZFK7
ZKJ	ZFK7
ZRE	ZFK7

SPECIFICATIONS

● Measuring system: Zirconia method
● Measurement range: 0 to 25%
● Repeatability: ±0.5%FS
● Zero drift: ±1%FS/week
● Span drift: ±2%FS/week
● Response time: Within 20 seconds (From calibration gas inlet)
● Power supply: 100 to 115V AC or 200 to 240V AC, 50/60Hz
● Outer dimensions: 170(W) x 140(H) x 190(D) mm
Easily replaceable zirconia element

PARAMAGNETIC OXYGEN ANALYZER

Paramagnetic oxygen analyzers maintaining quick response unaffected by combustible gases. Most suited for combustion control of heat treatment furnaces and combustion furnaces, and for chemical experiment.

O_2
Fast response type

Reference gas needless type

2-second fast response ZAJ-type

Type: ZAJ

### FEATURES ....
■ Response as high as 2 seconds.
■ Hardly affected by other gases (such as H_2 and CO_2).
■ A suppression range such as 21 to 100% O_2 is settable.
■ Gas-contacting parts are made of corrosion-resisting material
■ Automatic calibration function and communication function can be incorporated (at option).

SPECIFICATIONS ....
● Measuring principle: Paramagnetic method (Pressure detect type)
● Measurement range: (1) When reference gas is N_2
　　　　　　　　0 to 2 --------100%O_2 (freely settable)
　　　　　　　(2) When reference gas is air
　　　　　　　　21 to 23 -----100%O_2 or
　　　　　　　　21to 19 ---------0%O_2 (freely settable)
　　　　　　　(3) When reference gas is 100%O_2
　　　　　　　　100 to 98 -------0%O_2 (freely settable)
● Numbers of range: 2 ranges
● Repeatability: ±0.5%FS (in 10%O_2 or higher range)
● Linearity: ±2%FS
● Response time: Within 2 seconds (From sample gas inlet)
● Oxygen concentration output signal: 4 to 20mA DC or 0 to 1V DC
● Moving average time: 0 to 99.9 seconds
● Contact output: 2 points (1a relay contact) Calibration status, contact output of analyzer error
● Contact input (Option): Remote range changeover, output hold
● Indication: LCD display, Oxygen concentration display (4-digit),range display(4-digit), message display (24-digit, 2-line)
● Alarm output: Upper/lower limit alarm (Option)
● Communication interface: RS232 (Option)
● Automatic calibration method: Zero/span automatic calibration function (option)
● Power supply: 100 to 240V AC, 50/60 Hz
● Mounting method: Mounting on 19-inch rack, flush mounting on panel or desk top mounting

● ZAJ Type Gas Sampling System Diagram (Combustion exhaust gas example)
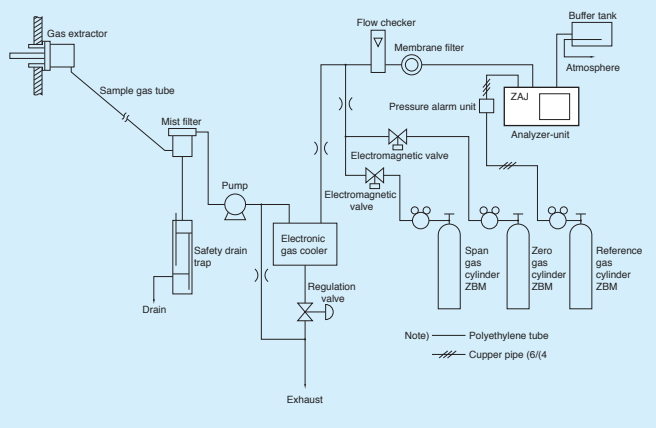

● ZAJ Type Measuring Principle Diagram
When the measured gas is placed in a magnetic field, oxygen molecules will be attracted. This gives rise to a pressure, which is detected by a mass flow sensor.
Scarcely affected by interference gasses

ZAJ type case (Deviation of zero point caused by flowing interference gas component at 100%)

FEATURES

■ Response as high as 15 seconds.

■ Hardly affected by other gases (such as H_2 and CO_2).

■ The front area measuring 220 x 443 mm is mounted flush with a panel.
SPECIFICATIONS

● Measuring principle: Paramagnetic method (Dumbbell type)

● Measurement range: 0 to 10,25,50,100%O_2 (as specified)

● Numbers of range: 1 or 2 ranges (as specified)

● Repeatability: ±0.5%FS

● Linearity: ±1.0%FS

● Zero drift: ±2.0%FS/week

● Span drift: ±2.0%FS/week

● Response time: Within 15 seconds (From calibration gas inlet)

● Oxygen concentration output signal: 4 to 20mA DC or 0 to 1V DC

● Indication: 4-digit LED (Oxygen concentration indication) in red

● Power supply: 100 to 240V AC, 50/60 Hz

● Mounting method: Mounted flush on panel

● Outer dimensions: 190(W) x 240(H) x 234(D) mm

● **ZKG type Measuring Principle Diagram**

There are two glass spheres in the cell.
When oxygen molecules flow there, they will be attracted toward the stronger magnetic field to cause a positional change of the spheres.
The displacement of the spheres is detected with a light receiving element.

CO₂ CONTROLLER

Protected Horticulture
For growing sweet melon and strawberry in greenhouse.

Storage of Fresh Produce
To create optimum environment for storage of fruit and vegetables.

Building Air-conditioning
For control of room ventilation in a building and save energy due to cooling and heating.

Gas analyzer for heat treatment furnaces

Gas sampling system

INFRARED CO₂ CONTROLLER with pomp built-in

Type: ZFP

(Aspirating pump, filter built in)

FEATURES
- ■With built-in suction pump and filter.
- ■Two 1c (SPDT) relay contacts incorporated.
- ■Analog output signal incorporated.

SPECIFICATIONS
- ● Measuring object: CO₂ concentration in air
- ● Measuring system: Single beam type infrared method
- ● Measurement range: 0 to 0.2 ---- 20%
- ● Repeatability: ±1.0% of full scale
- ● Zero drift: ±10% of full scale/6 months
- ● Response speed: Within 10 seconds (90% response)
- ● Concentration output signal: 4 to 20mA DC or 0 to 100mV DC
- ● Alarm output: Relay contact (2x1c) Upper limit, lower limit
- ● Indicator: Moving coil type, JIS 2.5 class
- ● Gas sampling: Aspirating pump, filter built in
- ● Power supply: 100V, 115V, 200V, or 220V AC, 50/60Hz
- ● Sample gas temperature: 0 to 50 C
- ● Outer dimensions: 220(W) x 257(H) x 85(D) mm
- ● Mass (Weight): Approx. 3kg

Gas analyzer for heat treatment furnaces

Type: ZFG

FEATURES
- ■Gas concentration in the furnace can be measured accurately. Repeatability: Within ±0.5% of full scale
- ■Due to use of single beam system for measurement, an excellent stability is ensured for a long period of time and maintenance is easy.
- ■The analyzer is capable of measuring gas concentrations of CO₂, CO and CH₄ components correlated to CP (carbon potential).
- ■CP calculation value can be displayed (option).
- ■The gas concentrations of 2 components of CO₂ + CO, CH₄ + CO, CO₂ + CH₄ can be measured simultaneously and continuously.

SPECIFICATIONS
- ● Measurable components: CO₂, CO, CH₄
- ● Measuring system: Single beam type infrared method
- ● Measurement range: CO₂ : 0 to 0.5 ·····100%
  - CO : 0 to 0.5 ······100%
  - CH₄ : 0 to 1 ···········10%
- ● Numbers of range: Max. 2 ranges
- ● Measurable components: Max. 2 components
- ● Repeatability: ±0.5% FS
- ● Drift: Within ±2.0% of full scale/week
- ● Response time: Less than 10 seconds (90% response from the device inlet)
- ● Output signal: 4 to 20mA DC or 0 to 100mV, 10mV DC
- ● Contact output: Instrument error, range identification signal
- ● Contact input: Remote range changeover, remote hold input
- ● Functions: CP calculation, output signal holding, Automatic OFF, etc
- ● Indication: LCD with back light
- ● Outer dimensions: 218(W) x 211(H) x 257(D) mm
- ● Power-supply voltage: 100 to 240V AC, 50/60Hz

Recorder (Option)

Paperless Recorder
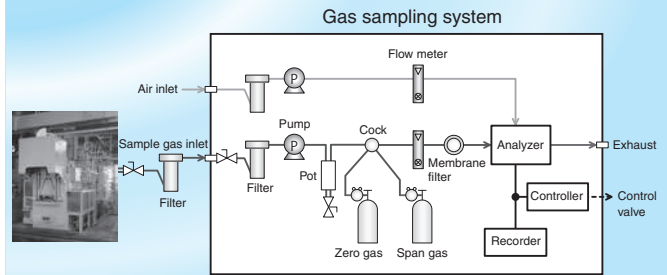

Type: PHF

◇ SPECIFICATIONS
- ● Recording method: Built-in memory card
- ● Data format: ASCII (Data can be read directly into Excel), Binary (Data cannot be read directly into Excel)
- ● Storage capacity: 512MB, max. (Stores 3years data).
- ● Input points: 3 or 6 points
- ● Display contents: Trend, bar graph, digital, historical trend, event summary, etc.

- ● Alarm indication: Upper/lower limit alarm indication (alarm output is option)
- ● Input signal: Thermocouples, resistance bulbs, voltage/current
- ● Indication accuracy: ±(0.15%+1 digit) of input range
- ● Power supply: 100 to 240V AC
- ● Outer dimensions: 160(W) x 144(H) x 185(D) mm
- ● Others: Standard-supplied PC support software

# Thermal Conductivity Gas Analyzer

Type: ZAF

FEATURES

■ Easy-to-see large LCD is helpful for efficient operation.
■ Measured value output signals are linearizable (at option).
■ Line voltage lies within 100 V to 240 VAC, 50/60 Hz.
■ Zero point and span can be automatically calibrated (at option).
■ Other gases interference is correctable (at option).
■ Commuticable with other system through an RS-232C interface (MODBUS™)(at option).
SPECIFICATIONS

● Measuring principle: Meaturement of thermal conductivity
● Measurement component: He, Ar, H_2, CH_4, CO_2
● Measurement range: Refer to Table 1
● Repeatability: ±1%FS
● Drift: Within ±2% of full scale/week
● Response time(90% response) : High speed type within 10 sec
Standard type within 60 sec
● Output signal: 4 to 20mA DC or 0 to 1V DC, 0 to 10 mV DC
● Display unit: LCD with backlight
● Mounting: Flush mounting on panel
● Power supply: 100 to 240V AC, 50/60 Hz
● Optional specifications:
Linearization
Relay contact output
Contact input
Interference gas meatured value input
Automatic calibration function
Communicating function

● Measuring principle

Measuring chamber | Sample gas | Reference chamber
DC constant current
Fixed resistor
DC amplifier

This thermal conductivity gas analyzer measures gas concentration by utilizing the different thermal conductivities of 2 gas components. In the detector, there are reference and measuring chambers in each of which a thin platinum wire is stretched. The reference chamber is filled with reference gas and through the measuring chamber, sample gas is flowed. Each platinum wire composes a bridge circuit in combination with an external fixed resistor, and it is heated by flowing a constant current. When there is a change in the concentration of the component under measurement, the thermal conductivity of sample gas will change to affect the temperature of the platinum wire in the measuring chamber. The resulting thermal change is taken out as a change in electric resistance, according to which the concentration of measured gas is calculated.

Thermal Conductivity Ratio of Gases

Gases	Comparative thermal conductivity (0°C) when replacing thermal conductivity of air (2.41 x 10^{-2} w/(m.k)) with 1
Sulfur dioxide gas SO_2	
Carbon dioxide gas CO_2	
Argon Ar	
Carbon monoxide CO	
Steam (100°C) H_2O	
Air	
Nitrogen N_2	
Oxygen O_2	
Methane CH_4	
Hydrogen H_2	

Table 1: Measurable Component and Measureble Range

Measured gas	Reference gas component (Note 1)	Measurable range	Range ratio (Note 2)
H_2	N_2, (CO_2, Ar, He)	0 to 3, 5, 10, 20, 50, 80, 100% 100 to 90, 100 to 80%	1 : 10
He	N_2, (CO_2, Ar) O_2, Air	0 to 5, 10, 20, 30, 40, 50, 80, 100% 100 to 90, 100 to 80%	1 : 10
Ar	N_2, O_2, Air, (He)	0 to 10, 20, 50, 80, 100% 100 to 90, 100 to 80%	1 : 5
CH_4	N_2, (CO_2, Ar, He)	0 to 20, 40, 50, 60, 80, 100% 100 to 80%	1 : 5
CO_2	N_2, O_2, Air, (He)	0 to 10, 20, 50, 100% 100 to 90, 80%	1 : 5

(Note 1) The parenthesized gases require inquiry.
(Note 2) Range ratio stands for maximum value.

Other gases' interference

Indication error of each measured value (vol%)

Interference component	He meter	CH_4 meter	Ar meter	CO_2 meter

H_2O 1.5°C saturation	–	–	–	−0.56

AUTOMOBILE EXHAUST GAS ANALYZER

Type: ZKE

◇ SPECIFICATIONS
● Measuring components: HC, CO, CO_2, O_2
● Measurement range:
HC: 0 to 10000ppm
CO: 0 to 10%
CO_2: 0 to 20%
O_2: 0 to 25%
● Measuring method: Infrared ray system

O_2: Galvanic sensor
● Certification number: JATA-CO, HC-5
● Communication interface: RS232C
● Indication: LCD with back light
● Power supply: 90 to 264V AC
● Outer dimensions: 270(W) x 156(H) x 365(D) mm
● Mass (Weight): Approx. 5kg

Basic Principle = NDIR   *NDIR: Non Dispersive Infrared Ray structure <Double beam type>

Certain gas absorbs certain range of infrared ray

It makes internal pressure in the left detector higher than one in the right detector.

By blocking the ray, the pressure in both detectors is equalized.

The changing volume of absorbing infrared ray is detected.

● Infrared single light source

There is less fluctuations of indication caused by the time lapsed of light source due to single source and dual beam method.
Single Light Source Provides

● Long Term Stability: ±0.5% to 2% FS/week

against dual light source.

→Both sources cannot be exactly same

→It creates error in measurement

Our test data of span drift for 28 days: Less than 1%FS

Examples of Application

Most recommended for energy saving in air-conditioning of buildings is a CO2 controller!

The CO2 gas concentration in a room is required to be within 1,000 ppm by law in Japan. To meet this, the fresh outdoor air is always taken in. Control of the air intake at an appropriate level will save energy to run the air-conditioner for cooling and heating.

# Infrared CO₂ gas analyzers essential for measuring CO₂ and O₂ of heat treatment and reforming furnaces.

Propane and butane gases are brought into contact with a hot catalyzer to generate the gases to be supplied into a carburizing furnace.

These gas analyzers measure each concentration of CO_2 and O_2 gases to be supplied into a carburizing furnace.

In iron treatment in a carburizing furnace, the CO_2 concentration of the in-furnace atmosphere is an index of furnace work.
